Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Customer Problem Statement

The customer problem statement focuses on the experience of students, teachers, and IT helpdesk staff who face delays and manual effort in handling school IT support requests.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	a student or teacher	report an IT issue and get it correctly categorized quickly	I have to depend on manual ticket classification	IT staff review each request and select the category and subcategory manually	frustrated and uncertain about how quickly my issue will be handled
PS-2	an IT helpdesk staff member	process and route support tickets efficiently	many tickets require repetitive manual classification	requests must be reviewed and categorized individually, which is time-consuming and error-prone	overloaded and concerned about delays and inconsistent classification

Source basis: The project identifies manual review, categorization, and routing as time-consuming and inefficient, with the objective of automating classification through Flow Designer.
