

Ideation Phase

Empathize & Discover

Date	6 October 2026
Team ID	SWTID-2026-6524
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Empathy Map Canvas

Primary user: School IT helpdesk staff, with students and teachers as ticket requesters.

THINK & FEEL Wants tickets classified correctly and quickly. Concerned about manual workload and errors. Wants a maintainable and scalable process.	HEAR Students and teachers report Wi-Fi, projector, password, and slow-computer issues. Users expect quick acknowledgement and support.
SEE Multiple support requests arriving daily. Tickets requiring category and subcategory selection. Repetitive manual classification work.	SAY & DO Reviews each incident. Selects category/subcategory. Communicates ticket creation to the caller.
PAIN Time-consuming manual classification. Risk of incorrect categorization. Delays when request volume increases. Repetitive work for IT staff.	GAIN Automatic classification at ticket creation. Consistent category/subcategory values. Reduced manual effort. Faster ticket routing. Automated caller notification.
