

Project Design Phase-II

Customer Journey Map

Date	6 October 2026
Team ID	SWTID-2026-6524
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Scenario: Auto Ticket Classification for a School IT Helpdesk

Stage	Step	Experience / Interaction	Touchpoint	Goal & Motivation
Enter	Open IT ticket form	Student/staff opens the ServiceNow ticket form.	ServiceNow form	Create a support request quickly.
Create	Enter caller and short description	User provides caller details and explains the issue.	Caller + Short Description	Describe the problem clearly.
Classify	Submit ticket	Flow Designer evaluates keywords such as WiFi, Projector, Password/Login, Slow/Hanging.	Flow Designer	Avoid manual category selection.
Confirm	View classified ticket	Category and Subcategory are automatically populated and stored.	Ticket record	Know the issue was categorized correctly.
Notify	Receive confirmation	Automated email is sent to the caller.	Email	Feel confident the request was submitted.
Resolve	IT team processes ticket	IT staff use standardized ticket information for handling.	IT Agent / Ticket	Get the issue handled efficiently.
Extend	Maintain classification rules	Administrator updates Flow Designer conditions when new issue types arise.	Flow Designer	Keep the solution maintainable and scalable.

Positive Moments

- Automatic classification reduces manual effort.
- Dependent choices improve consistency.
- Email confirmation provides immediate acknowledgement.
- No-code Flow Designer simplifies maintenance.

Negative Moments

- Keyword-based rules cover only predefined issue patterns.
- Unsupported or ambiguous descriptions may require manual handling.

Areas of Opportunity

- Add more classification rules.
- Add automated assignment to support groups or agents.
- Add SLA tracking and escalation workflows.
- Future extension could include predictive intelligence.
