

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	6 October 2026
Team ID	SWTID-2026-6524
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Functional Requirements

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Ticket Creation	Caller details and short description can be entered to create a new IT support ticket.
FR-2	Automatic Classification	Flow Designer analyzes the short description and automatically assigns Category and Subcategory.
FR-3	Dependent Choice Logic	Subcategory options dynamically depend on the selected Category.
FR-4	Email Notification	An automated confirmation email is sent to the caller after ticket creation/classification.
FR-5	Structured Ticket Storage	Ticket information is stored in a structured and standardized format.
FR-6	Ticket State Management	Ticket state supports New, In progress, On hold, Resolved and Closed.

Non-functional Requirements

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The user only needs to enter caller information and a short issue description; classification is automated.
NFR-2	Security	Only authorized users should access or modify ticket data through ServiceNow access controls.
NFR-3	Reliability	Supported keywords should consistently produce the intended category and subcategory.
NFR-4	Performance	Automatic classification occurs during ticket processing without manual category selection.
NFR-5	Availability	The solution operates within the ServiceNow helpdesk workflow.
NFR-6	Scalability	The Flow Designer solution can be maintained and extended with additional classification rules.
