

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) Who is your customer? i.e. working parents of 0-5 y.o. kids Students and teachers using the school IT helpdesk; IT support staff are the operational users.	6. CUSTOMER CONSTRAINTS What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices. Limited IT staff time, growing ticket volume, inconsistent descriptions, and the need for quick routing.	5. AVAILABLE SOLUTIONS Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking Manual review and categorization by IT staff; useful for small volumes but slow, error-prone and hard to scale.	Explore AS, differentiate	
	2. JOBS-TO-BE-DONE / PROBLEMS Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides. Create a ticket, identify the issue type, route it correctly, and receive confirmation without extra manual classification.	9. PROBLEM ROOT CAUSE What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations. Classification depends on manual identification of the issue type. Increasing requests make the process slow and inconsistent.	7. BEHAVIOUR What does your customer do to address the problem and get the job done? i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace) Users submit a short description. IT staff review it, select Category/Subcategory, and process the request.		Focus on J&P, tap into BE, understand RC
	3. TRIGGERS What triggers customers to act? i.e. seeing their neighbour installing password/login problems, slow computers, or other incidents requiring IT support. 4. EMOTIONS: BEFORE / AFTER How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure > confident, in control - use it in your communication strategy & design. Before: frustrated or uncertain while waiting. After: informed and confident because the ticket is classified and acknowledged.	10. YOUR SOLUTION If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour. ServiceNow Flow Designer reads keywords, assigns Category/Subcategory, stores the ticket, and emails the caller.	8. CHANNELS of BEHAVIOUR 8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7 Online: ServiceNow incident form and automated email. 8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development. Offline: school IT helpdesk assistance.
