

Project Design Phase Proposed Solution Template

Date	6 October 2026
Team ID	SWTID-2026-6524
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	The school IT helpdesk receives multiple incident requests daily. Manual review and categorization of Wi-Fi, projector, password and computer-performance issues is time-consuming, error-prone
2.	Idea / Solution description	Use ServiceNow Flow Designer to analyze the incident short description and automatically assign the appropriate Category and Subcategory. After classification, an email confirmation is
3.	Novelty / Uniqueness	A no-code keyword-based classification workflow with dependent Category/Subcategory choices provides consistent ticket routing without complex scripting or machine learning.
4.	Social Impact / Customer Satisfaction	Reduces IT staff workload, improves ticket-routing efficiency, and gives students and teachers immediate confirmation that their request was submitted.
5.	Business Model (Revenue Model)	The solution provides institutional value by reducing manual IT support effort, speeding up ticket handling, and improving IT service efficiency.
6.	Scalability of the Solution	The flow can be extended with more issue types, assignment automation, SLA tracking, dashboards, reporting, and predictive intelligence as ticket volume grows.
